Blind Shaft - Incremental Optical Encoder

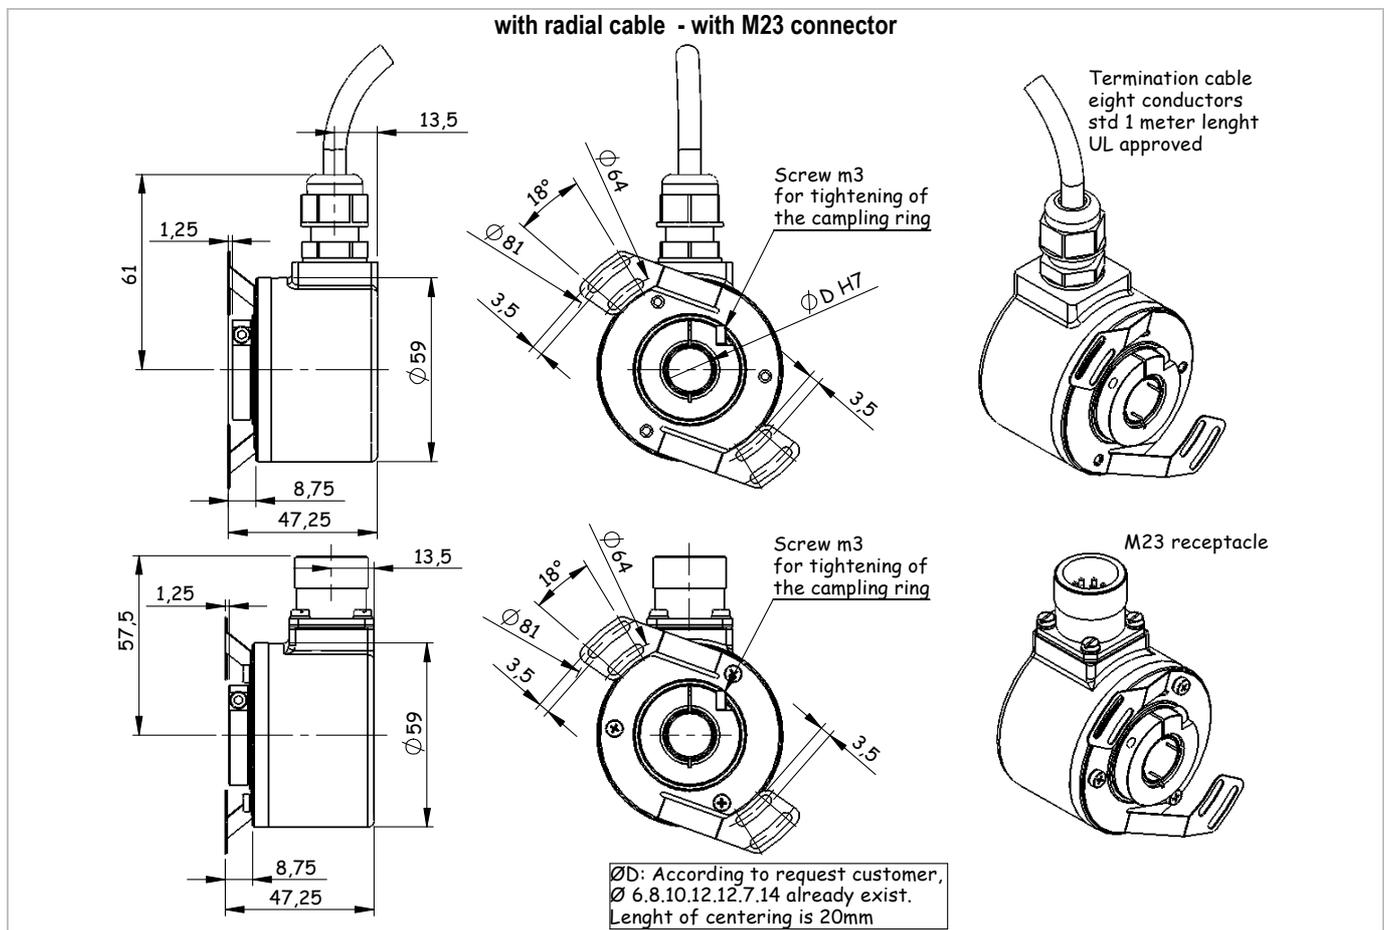

PRECILEC optical incremental encoders are designed for accurately measuring speed and position of rotating shafts in industrial environment: machine tools, motor drives ... They use a differential optical measurement and a ratio-metric processing of the signal for minimizing the temperature and photodiode aging effects. Their universal complementary push-pull output interface and their large supply voltage range make them very easy to connect to most of electronic control units with high noise immunity.

Main features

- Shaft type Standard Blind Shaft $\varnothing 15$ mm : others diameters available ($\varnothing 6, 8, 10, 12, 14$ mm) with reduction ring
- Housing diameter 59 mm
- Fixation Spring plate with 2 fixation arms
- Body - Cover Aluminium – Zamac
- Shaft Stainless steel
